General

1. Introduction

Gpgsql2shp provides a graphical interface to create shapefiles from PostGIS databases.

Gpgsql2shp is available from <http://sdteffen.de/gis/gpgsql2shp.html>. It is free software released under the terms of the GPL license - the full source code is available (Open Source).

This manual describes *Gpgsql2shp* version 0.2.0.

1.1. What's New?

A summary of changes in the different versions of the AV PostGIS Extension.

1.1.1. Version 0.2.0

First public *Gpgsql2shp* release.

2. Requirements

GTK+ version 2.6 or higher is required in order to use the *Gpgsql2shp*.

A PostgreSQL database with the PostGIS extension is required.

3. Installation

How to install *Gpgsql2shp*.

3.1. Installation Using the Installer

How to install the *Gpgsql2shp* using the installer.

Download the *GTK+* runtime installer and execute it.

Download the installer and execute it.

Reference

1. Usage

Run the program.

Fill in the required information.

Click on the OK button.

Review the message.

2. Configuration

2.1. Environment Variables

A number of standard PostgreSQL environment variables are used by Gpgsql2shp, if they are set:

PGPASSWORD
PGHOST
PGPORT
PGDATABASE
PGUSER

3. Commandline Usage

Gpgsql2shp accepts the shapefile name as a commandline argument.

```
Gpgsql2shp [shapefile]
```

4. Troubleshooting

Please report problems through the AVPGCon trackers.

Please include the full contents of the three output fields (commandline, output, errors).

5. Security

Caution

Gpgsql2shp stores the password temporarily in an environment variable. If this is not secure enough for you, please do not use Gpgsql2shp.

6. Development

The version number shall be derived from the packaged PostGIS version plus an additional digit for the actual extension.

PostgreSQL releases with security fixes trigger new Gpgsql2shp releases.

6.1. Release Process

Update the version number in `build.xml`, `installer/win32/gpgsql2shp.nsi` and `doc/en/gpgsql2shp.xml`.
